### **DETAILED ACTION**

This office action is in response to the Amendment filed 17 June 2004.

#### ***Allowable Subject Matter***

Claims 1, 3-16, and 18-45 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record neither teaches nor suggests the claimed method for removing volatile components from a polymer powder, wherein said polymer powder meets the chemical structure limitations of claims 1 and 32, and wherein powder seals are used within the extruder, downstream of the powder conveying section and upstream from the kneading/melting section and vacuum vent. Regarding the examiner's arguments to the contrary (see Final Rejection, mailed 16 April 2004), it is hereby noted by the examiner that upon further review of prior art in the extrusion field, powder seals and melt seals operate via different principles and would not be considered interchangeable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1732

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patent is cited to further show the state of the art with regard to processes involving polycarbonate resin powders:

U.S. Patent 6,492,485 to Gohr et al. (It is especially noted that this patent contains processes dealing with polycarbonate powders, but there is no suggestion of using a powder seal instead of a melt seal.)
